

Accelerate your Web experience and go 5X faster with AiTech FastNet Internet Service. The convenience of Dial-up without the wait.

FastNet Go 5x Faster!

FastNet speeds up your Internet experience, by up to five or six times, using an existing dial-up phone line and modem. No extra equipment is required.

FastNet allows you to surf at near DSL speed, making FastNet the high-speed Internet solution for your customers. It is easy to install, has the convenience of dial-up, runs seamlessly and doesn't alter any existing software.

- Unlimited Internet access in most areas
- 5 email accounts with Webmail access
- Free Pop-Up blocker
- SPAM email filter option
- No contract commitments

www.goait.com

How does it work?

With traditional dialup methods, the text and graphics that make up Web pages get sent from the server to you over your phone line. Because of the large amount of data required to be sent, this process can be painfully slow. FastNet compresses this data using a proprietary technology, and sends it over your existing dialup phone line. This compression process allows a smaller amount of data to be sent— up to six times less — making the download time of your Web pages and your online experience that much faster. As an added download time reducer, FastNet stores elements of the Web sites you visit frequently so you do not have to re-download them every time you visit these sites. FastNet also features email acceleration technology which increases the downloading / uploading speed of email by about 250%.

What will be accelerated?	What will <i>not</i> be accelerated?
Web Pages	Streaming Media
HTML markup	Audio & Video Files
Text	Secure Pages
Email	Files & Attachments

FastNet System Requirements

- Dialup Internet Connection
- Supported Internet Browsers: IE 5+ or Netscape Navigator 4.7 +. Opera or Mozilla require additional configuration.
- Windows OS: Pentium PC 200MHz or better with Windows 98, ME, 2000, or XP (Mac and Linux are currently not supported).
- Available Disk space: 5 MB
- System Memory (RAM): 64 MB of RAM recommended

Ask about our Affinity Group Programs!

We have the ability to customize Internet service programs for special interest groups. We can provide a custom built Web site for standard dial-up and FastNet service utilizing a custom domain and interface specific to a group's requirements.

Why should I market AiTech's FastNet Internet service to my customers?

Your customers will be amazed the first time they log on and experience download speeds 5-6 times faster than a standard dial-up connection. This is the most economically viable option to broadband connections in the marketplace. Don't wait, start marketing this service to your end users today!!

Additionally, internet service can contribute to boosting your per account compensation. Bundle our FastNet service with other great AiTech products.
